

NextWindow Touch Screens Integrated Into Most Popular Touch-Enabled PC

The latest optical touch technology is revealed in HP's TouchSmart All-in-One PCs.

PLEASANTON, CA – October 13, 2008. It's no surprise that NextWindow's touch screens have ended up on the face of the world's most produced touch-enabled PC ever. With increasing demand for image clarity, touch accuracy and low cost, NextWindow's integrated touch displays are the perfect fit.

The HP TouchSmart PC features an intuitive interface that allows you to view pictures, sort music, watch television and play games with the touch of your finger instead of using a mouse or keyboard.

“We can all expect a renewed relationship with personal computers in the coming years, with touch providing an additional and easy way to access information” said NextWindow CEO, Al Monro.

“Enabling personal computers with our touch technology provides a tool for the user that is intuitive, flexible, powerful and fun.”

In addition to personal computers, NextWindow's touch-sensitive screens are found in digital signage, kiosks, exhibits and retail displays. NextWindow's optical technology allows virtually any flat screen up to 120 inches to be converted into a touch-enabled monitor.

About NextWindow

NextWindow is a leader in touch-screen technology and a major manufacturer of optical multi-touch displays. With highly accurate, cost-effective solutions, NextWindow provides the hardware necessary to bring touch applications to life—giving software designers the freedom to create new, exciting and intuitive user interfaces. NextWindow is privately held with offices in New Zealand, Taiwan and California. More information about NextWindow is available at nextwindow.com.
